

Life-changing Education

- I know the excellent reputation that the university has in the community
- It's been an asset to me professionally to be able to take the things that I'm learning in school and not feel like it's busy work
- It's very much down to earth and it's knowledge you can use right away
- I was able to apply what I learned in the classroom into the actual work place
- But, to be able to take it and use in my classroom
- And found success in doing that
- My academic pursuits were really a reflection of my value that I placed on my call
- I think obtaining a degree gives you opportunities to explore different career paths, gives you choices, which is very important to me
- As I started taking classes I just had such a great self-worth
- That moment was a moment that changed my life
- And I would encourage anyone that has doubt that thinks they can't do it, you can do it.
